## Overview

Oscar Awards DB is a command-line database system that was created on Ubuntu with Python 3 and MySQL 8.0.

It keeps track of information about Academy Awards (Oscars) films, nominees, categories, ceremonies, and nations.

You can:

- See the winners, nominees, and films by year.
- Use stored procedures to compile the list of film nominees and winners.
- Use database triggers to stop invalid updates.
- To query data without knowing SQL, connect using Python.

## What's inside the folder

- createTable.sql
- LoadData.sql
- Queries.sql
- Procedures.sql
- Triggers.sql
- connect\_oscar\_db.py
- Database Assignment User Guide
- Database Assignment Report
- Category.csv
- Ceremony.csv
- Country.csv
- Film.csv
- Nominee.csv

## Set Up the Database

Run the SQL script

```
Isini@Isini:~/database$ sudo mysql -u root -p
[sudo] password for Isini:
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 8
Server version: 8.0.43-0ubuntu0.24.04.2 (Ubuntu)

This guide enables any user to install, configure, and run the Oscar Awards DB system on Ubuntu with MySQL and Python 3. It validates both database integrity and external interoperability required for the ISYS2014 assignment.
